March 2026

High Growth Strategy

Unless otherwise stated, all data as at 31 March 2026

Fund characteristics

This fund is classified as a “fund of funds” a fund which invests in a number of other funds managed by a range of fund managers. A fund of funds is a fund that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds. There is an increased risk that the value of the investment will go down in the short term, although potential for capital growth over the medium to long term is higher. There may be some fluctuation on capital value and/or return. You should be willing to invest for the medium to long term (7 – 10 years).

Fund objective

Seek to provide a greater potential for long-term capital growth through investment in a portfolio of funds investing primarily in equity based assets and will therefore have a higher level of volatility over the longer term. This Fund operates a high growth investment strategy where equity exposure is likely to exceed 92.5%.

Fund policy

The policy of the Fund is to invest in collective investment funds managed by a range of carefully selected fund managers. These underlying funds, in turn, invest across the capital markets in asset classes including bonds, equities, property and cash. The Fund may also hold cash deposits to enable Shares to be repurchased or for the efficient management of the Fund.

Risk classification

The Summary Risk Indicator table is a guide to the level of risk and volatility of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or the type of underlying assets in which the fund invests. The shaded area in the table shows the fund’s classification on the Summary Risk Indicator.

We have classified this product as 4, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact the amount you could get back.

This fund invests into other funds which themselves invest in assets such as bonds, company shares, cash and currencies. The objectives and risk profiles of these underlying funds may not be fully in line with those of this fund.

The value of investments and the income from them can go down as well as up and cannot be guaranteed. Investments in a currency other than the shareholder’s own currency, or in a fund that invests in securities denominated in currencies other than its own base currency, will be subject to the movements of foreign exchange rates, which may cause an additional favourable or unfavourable change in value. Consequently, investors may, on selling their shares, receive an amount greater or less than their original investment.

Where foreign securities are included in a portfolio, the portfolio is exposed to risks such as potential constraints on liquidity and the repatriation of funds, macroeconomic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information.

Fund performance

All performance data is for lump sum investments. The figures show the performance growth over 10 years on a NAV to NAV basis with gross income reinvested. All charges and fees, except any initial charge, have been included in the fund performance figures. Annualised performances show longer term performance rescaled over a 12 month period. Individual investor performance figures are available on request and may differ as a result of initial fees, the actual investment date and the date of dividend reinvestment. Performance is calculated for the fund’s portfolio and individual investor performance may differ as a result thereof.

Annualised performance %

As at 31 March 2026

	1 Year	3 Year	5 Year	10 Year
High Growth Strategy	9.68	8.00	4.05	6.41
Benchmark: Morningstar GBP Allocation 80%+ Equity	11.24	8.70	5.53	7.20

Effective annual cost ('EAC')

The EAC is a measure which has been introduced to allow you to compare the charges you incur and their impact on investment returns when you invest in different Financial Products. It is expressed as an annualised percentage. The EAC is made up of three components, which are added together, as shown below. The effect of some of the charges may vary depending on your investment period. The EAC calculation assumes that an investor terminates their investment in the Financial Product at the end of the relevant periods shown in the table.

Impact of charges for a lump sum	1 Year	3 Year	5 Year	10 Year
Investment management charges ¹	1.83%	1.83%	1.83%	1.83%
Advice charges ²	0.00%	0.00%	0.00%	0.00%
Administration charges ³	0.00%	0.00%	0.00%	0.00%
Effective annual cost	1.83%	1.83%	1.83%	1.83%

1 This figure represents the Total Expense Ratio* ('TER') and the Transaction Costs** ('TC'), where applicable. | 2 Canaccord International Fund Managers Limited cannot provide investment advice and therefore no Advice Charge can be included in the calculation. | 3 This figure represents the Initial Charge. | * The TER is the total expenses charged to the Fund and includes the Annual Management Fee, the Custodian Fee and operating expenses calculated over a rolling three-year period and annualised. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TERs. | ** TC are the costs incurred relating to the buying and selling of the assets underlying the fund. TC are a necessary cost in administering the fund and impact the fund returns. TC should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

Portfolio breakdown (%)

North American Equity	37.84	UK Equity	9.50
International & Thematic Equity	24.19	European Equity	5.19
Japan, Far East & Emerging Markets Equity	18.10	Cash	5.18
